

Higher-Density Development

MYTH AND FACT

**Urban Land
Institute**

MYTH

Higher-density developments lower property values in surrounding areas.

FACT

No discernible difference exists in the appreciation rate of properties located near higher-density development and those that are not. Some research even shows that higher-density development can increase property values.

The precise value of real estate is determined by many factors, and isolating the impact of one factor can be difficult. Although location and school district are the two most obvious determining factors of value, location within a community and size and condition of the house also affect value. Several studies have examined whether multifamily housing has any impact on the value of nearby single-family detached houses. These studies have shown either no impact or even a slightly positive impact on appreciation rates.

PROFILE

HAILE PLANTATION CORPORATION

Haile Plantation

Haile Plantation is a Gainesville, Florida, icon. Although it is denser than surrounding communities, the values of homes in Haile Plantation are often higher than the values of houses in neighboring lower-density communities, because the traditional neighborhood design employed there makes Haile Plantation more desirable and valuable. Beginning with the master plan in 1979, Haile Plantation has been called one of the first new urbanist communities in the country. Developers Bob Rowe and Bob Kramer in conjunction with the Haile Plantation Corporation developed the 1,700-acre site to include more than 2,700 units, ranging from single-family homes to townhouses and garden apartments. The sense of community has only grown with the expansion of the development to include a town center, a village green, trails, civic uses, and offices. Indeed, it is density and diversity that together add value to this popular Florida community.

Homes in Haile Plantation sell for more than neighboring homes because prospective buyers view the traditional neighborhood design as a valuable and desirable amenity.

For instance, one study by the National Association of Home Builders looked at data from the American Housing Survey, which is conducted every two years by the U.S. Census Bureau and the Department of Housing and Urban Development. It found that between 1997 and 1999, the value of single-family houses within 300 feet of an apartment or condominium building went up 2.9 percent a year, slightly higher than the 2.7 percent rate for single-family homes without multifamily properties nearby.¹⁸

Another study, commissioned by the Family Housing Fund in Minnesota, studied affordable apartments in 12 Twin Cities neighborhoods and found “little or no evidence to support the claim that tax-credit family rental developments in [the] study eroded surrounding home values.”¹⁹ And a long-term study by Harvard University’s Joint Center for Housing Studies published in 2003 also confirms that apartments pose no threat to nearby single-family house values, based on U.S. Census data from 1970 to 2000.²⁰

Not only is there compelling evidence that increased density does not hurt property values of nearby neighbors: researchers at Virginia Tech University have concluded that over the long run, well-placed market-rate apartments with attractive design and landscaping actually increases the overall value of detached houses nearby.²¹ They cite three possible reasons. First, the new apartments could themselves be an indicator that an area’s economy is vibrant and growing. Second, multifamily housing may increase the pool of potential future homebuyers, creating more possible buyers for existing owners when they decide to sell their houses. Third, new multifamily housing, particularly as part of mixed-use development, often makes an area more attractive than nearby communities that have fewer housing and retail choices.²²

P R O F I L E

Echelon at Lakeside

Echelon at Lakeside is the only multifamily development in an upscale, master-planned single-family suburban neighborhood of Lakeside on Preston in Plano, Texas a suburb of Dallas. Florida-based developers Echelon Communities, LLC, overcame initial community opposition from area residents through high-quality innovative design. The award-winning architecture blends seamlessly with the surrounding neighborhood’s traditional style. Larger-than-normal floor plans, individual entries, and attached garages combine to mirror the grand

estates in the surrounding communities. Although street elevations make the buildings appear to be one single-family home, they actually house several multifamily units. Memphis-based architects Looney Ricks Kiss used five building types and three building styles. All units include high-quality interior finishes; community amenities include a resort-style pool, fitness facility, clubroom, business and conference center, and full-time concierge.

AVERAGE ANNUAL APPRECIATION FOR SINGLE-FAMILY DETACHED HOMES BY NEARNESS TO MULTIFAMILY BUILDINGS

Source: NAHB computations based on data in the *American Housing Survey: 1997 and 1999* (Washington, D.C.: U.S. Bureau of the Census and U.S. Department of Housing and Urban Development, 1997 and 1999).

Concerned citizens should use the entitlement process to demand high-quality development in their communities while understanding that density and adjacent property values are not inversely related. Higher-density real estate developers and investors in higher-density real estate need to appreciate the fact that most Americans’ wealth is held in their home equity. Therefore, changes in property values can have very real consequences to existing property owners. Likewise, homeowners would benefit from knowing that developers make a substantial financial commitment when investing in new higher-density projects. This investment is an incentive to make the project successful, which can give the community leverage in working with the developer. Such interrelated and overlapping economic interests among these stakeholders make it all the more likely that a mutually beneficial agreement can be reached. Such an agreement can result in a project that enhances the existing community, ensures the appreciation of residents’, developers’, and the local government’s financial interests, and addresses the needs of current and future residents of the community and region.
